OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
COHO	9/28/2005		X	X	<input checked="" type="checkbox"/>
Rainbow Trout	9/28/2005		X	X	<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Tributary to Grouse Creek / Salmon Creek that flows under highway at MP 7 of Seward Hwy. The culvert is approximately 200' downstream of the confluence Lost Creek and Grouse Creek. We set four steel 1/8 inch mesh minnow traps using cured and disinfected salmon roe bait. Two traps were set downstream of the culvert and two traps upstream of the culvert. The four traps soaked for 80 minutes. More juvenile fish observed around the minnow traps. One hundred and twenty three juvenile coho were caught both upstream and downstream of the culvert at milepost 7. There were 27 coho in the smolt phase that were caught. Eleven rainbow trout were caught only on the upstream side of the culvert. The survey upstream of the culvert did not determine the upper limits of habitat. Three-spine sticklebacks were also present upstream and downstream of the culvert.

Add new stream w/CCP 231-30-10080-2010-3065-4110
